

Unprinted Labels

You determine the contents - we provide the unprinted labels

Different colors

Different shapes and dimensions

white or silver

THE CHALLENGE

Various products require blank labels for individual identification. Labels are printed using a thermal transfer printing system directly on the production line or at a decentralized print room. Because the label materials have to adhere permanently to various surfaces, good adhesion force values and high resistance against chemicals are a must.

THE SOLUTION

Label requirements including content and design are developed in cooperation with you. A wide variety of different materials and material combinations are possible. Even custom colors can be produced as printable labels. Thanks to our many years of experience, we are able to offer professional advice and support for all your printing questions.

OUR PRODUCT

The unprinted labels in our Blank product series come in various layouts, qualities and formats for self-printing. From simple paper labels to highly specialized film materials, our portfolio offers a comprehensive selection that will surely contain the right label material for you. The labels are specially developed for post-inscription and some special materials can also be printed in the so-called direct thermal process, at low cost and without any thermal transfer ribbons.

YOUR BENEFIT

Digital printing means that there are almost no limitations to label design. Company logos, consecutive barcodes or individual lot and batch numbers are all printable. A wide selection of different materials in different forms and sizes, as well as the related printing and application systems offer you a complete, one-stop labeling service.
