

Multi-Colored Labels

Colored labels – leaving a permanent impression

Labels are printed in 4-color process

Labels are printed in spot color

4-color process

THE CHALLENGE

Plain packages or components should be labeled using high-quality and multi-colored self-adhesive materials. Safety instructions and important product information should catch the customers eye and be quickly recognizable. A striking and attractive design should be selected.

THE SOLUTION

With customer-specific information, we develop suitable drafts and solutions using our comprehensive color and material selection. We can use different materials and material combinations. Even special laminate films can be individually chosen according to product requirements.

OUR PRODUCT

The product is used in various industrial applications based on its multitude of color and material combinations. Two to six colors can be printed effortlessly such as the picture print according to the 4C Euro Scale. There are practically no color limits because our special inseting process offers the capability to print labels with perfect registration even with several machine runs. Naturally, our labels offer high resistance in long-term tests.

YOUR BENEFIT

General and affordable identification of your products is possible thanks to the wide array of material and color combinations. Designs for the product can be modified quickly, easily and inexpensively. Adhesives for extreme conditions can be selected according to your needs.
