## THE CHALLENGE

Your product calls for a label with exceptional effect. Besides outstanding aesthetics you signal the quality and value of your product in the most brilliant manner. This does not only visualize the difference to common identification – the customer can even feel it.

## THE SOLUTION

In a special coating process the two-dimensional label becomes a three-dimensional object. The softness and thickness of the transparent coating can be adjusted to your specifications, rendering the optical result you envisioned. Besides using an ultra-clear resin, we can also coat with colored resins or even implement smells.

## OUR PRODUCT

With the 3D-Design labels we offer the special identification solution for your visually demanding labeling task. Besides the decorative effect of our 3D-Design labels, these labels are extremely resistant to environmental influences while also incorporating a high scratch resistance. Due to its closed and easy-to-clean surface this generation of labels is also extremely suited for use in the technical field or on consumer products. Using 3D-Design labels for your identification needs will generate interest in your product while leaving a lasting impression.

## YOUR BENEFIT

You receive a highly sophisticated label, which is entirely different from any common label. With a large number of different materials and adhesives we guarantee all prerequisites necessary for flexible identification of your products. Our Labeling & Automation can supply you with the necessary application systems, even a dispensing unit for automated processing is available.
