

# Barcode Labels

Each symbol is important – with or without barcode

Nameplate with 2D Data Matrix Code

Serial numbered

Barcode labels with color dots

## THE CHALLENGE

Secure traceability in all production steps requires a custom inscribable label with high resistance. In addition, a combination of different colors should be available for quick visual identification.

## THE SOLUTION

A digital printing system connected to a database custom inscribes barcodes, alphanumeric symbols, simple numeration or 2D data matrix codes according to customer specifications. The same contents can also be applied to different label shapes using multi-part label sheets. The high precision of this digital personalization ensures the closest production tolerances, while subsequent lamination provides the highest resistance against mechanical and chemical influences.

## OUR PRODUCT

If you cannot manufacture your own labels, the barcode labels are just the thing for your identification needs. All we need to produce your customized labels is information about the label contents, for example the type of numeration used and the desired textual content. You decide what information and code to use. All materials used for the barcode labels are extremely resistant and can also be furnished with a protective laminate film with our modern machinery.

## YOUR BENEFIT

This solution requires only minor production changes in the manufacturing of your products and no investment into the thermal transfer printing system. With this product family, we guarantee affordable product handling and also offer the options of barcode verification and printout of a test report in PDF format.
