

# Place labels

**Stick on, remove, stick on, remove – as often as you want**

Ugly residues when removing old labels

One time preparation of the bin with the place label

Removal of the label residual free again and again – no residues left behind, guaranteed!

## THE CHALLENGE

Container boxes or bins have to be repeatedly marked with the current information. The current applied label has to be removed for the new one to be applied. When removing the old label, parts of the label are left on the surface. The removal of the residues and the cleaning of the bins are complex and costly, which turn a cost effective refillable system into an expensive one-way system.

## THE SOLUTION

A placeholder location is created with a special label construction, which makes multiple adhesions possible. The complete label construction is applied to your product in one step. The special surface coating enables the subsequent multiple adhesion and removal of the later applied labels.

## OUR PRODUCT

With the place label you are creating the optimal basis for multiple labeling of bins or boxes in your logistics process. Just affix the place label where you wish to reapply labels over and over. The labels placed on the place label can be removed residual-free anytime due to the special coating of the place label. Various adhesive systems are available for the fixing of the place label onto the bins or boxes, guaranteeing a durable adhesion any time.

## YOUR BENEFIT

The label construction of the place label is to be applied in one step. The in further processes applied identification labels onto the place label can be removed residue-free. Save a lot of time for complex and costly cleaning of the bins and boxes. Incidentally, the imprint on the place label serves as a distinguishing characteristic for the adhesion, so the operator always knows where to stick on the identification label. The imprint can be individually designed concerning color and text, even multilingual versions are possible. We there are a variety of materials and adhesive available, so that we can meet even extreme requirements.
