

# Asset Labels

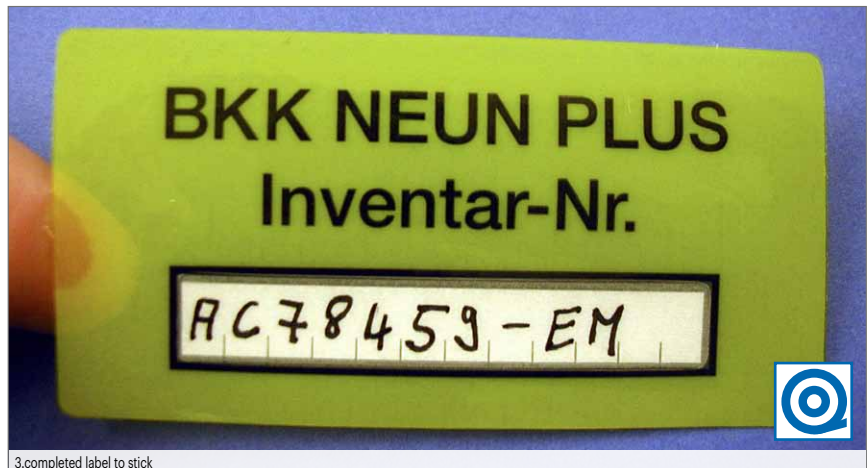

**Because everything is worth something – label your assets**

1. manual marking

2. remove, turning and inserting

3. completed label to stick

## THE CHALLENGE

The leading accounting and auditing firms agree that valuable inventory assets should be clearly identified. The key is the simple application of an ID label while preventing future tampering. The used asset label is to be filled out manually with the appropriate data before the installation of the asset.

## THE SOLUTION

In the first step our special design allows the easy inscription on the backside. After you entered your customer specific ID number you can peel off the paper strip holding the number, turn it over and reapply it to the space you just removed it from. Now remove the entire label from the liner and apply it to your asset to finish the marking process.

## OUR PRODUCT

Use asset labels for your special requirements in asset inventory. The performance of asset labels is possible due to the unique combination of materials. The secure integration of the manually entered number guarantees the permanent and reliable labeling of your assets. Additional safety features can be integrated in the design of the labels.

## YOUR BENEFIT

Intelligent label design allows manual completion of the information prior to the application of the asset label. All formats – fan-folded, on rolls and sheets – are available. With a large number of different materials and adhesives we guarantee all prerequisites necessary for flexible identification of your products. Profit from our extensive expertise and experience by duplicating and adapting previous developments to your requirements.
